

ENGAGE

Get more from e-Research

The **ENGAGE** project will accelerate the adoption of e-Research technologies by meeting with researchers and developing software and services to fulfil their needs.

If you would like to benefit, contact **ENGAGE** at info@omii.ac.uk or visit www.engage.ac.uk.

JISC

Engaging with researchers

How can ENGAGE help me?

The ENGAGE project could develop software and services to support YOUR research. By letting us know how your research could benefit from better computing, you can help us develop access to computing that is easier, faster, more linked up and provides richer results.

How does it work?

ENGAGE is currently identifying and interviewing researchers from all disciplines that could benefit from e-Research technologies. The results of these interviews will be reviewed to identify the 'big issues' that are hindering e-Research adoption and the 'big wins' that could help it.

Solutions to some of the big issues will be developed and made freely available so that the entire research community will benefit. The solutions may involve the development of new software, or may simply require the provision of more information and training.

How do I get in contact?
